

Heats approximately 60% more space than gas heaters

Safe to touch - preventing burns

Snap in heating tubes, easy to replace

Worlds first ambient carbon fibre heating tube

3 years limited warranty

technoheater

— THE COOL WAY TO KEEP WARM —

WELCOMING THE NEW RANGE

NEW TO 2016

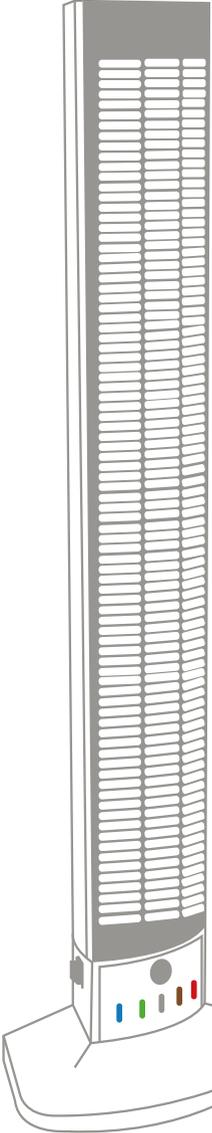

The new and improved range now includes free-standing, wall mounted and hanging models.

technoheater

— THE COOL WAY TO KEEP WARM —

PERFECT FOR USE IN INDOOR AND OUTDOOR USES.

Whether situated at home or at a bar, restaurant, patio, cafe, farm, market, poolside, function room, marquee, garage, loft, the Technoheater is fantastic for commercial and personal use.

CARBON FIBRE INFRARED HEATING TECHNOLOGY

The Technoheater range utilises carbon fibre infrared heating elements which are the future of heating. Unlike other heaters, the Technoheater doesn't heat air, metal or water, they heat the person. The Technoheater range is much much more efficient and cost effective than other gas heaters.

Another advantage of the Technoheater range is the lack of heavy gas cylinders or other fuel sources as the Technoheater runs off a standard mains power output. The patented carbon fibre heating elements are able to emit heat through infrared waves whilst operating at extremely low running costs.

The Technoheater range's running costs are 75% cheaper than comparable heaters. The heaters have an effective heating coverage of 3.5m and a heating angle of 130° which gives an outstanding 14m² overall coverage.

Not only safe, but also highly beneficial for your physical well-being..

S.A.A.

REVOLUTIONISING THE INDOOR AND OUTDOOR HEATING INDUSTRY

WATERPROOF

Technoheaters have an IP55 water resistance which means that they are safe to use outside in light rain or snow. The Technoheaters waterproof technology allows it to be able to withstand water and other accidentally spillages. The heater is ideal for commercial use where a permanent heater is necessary.

YOUR TECHNOHEATER LIFESPAN

The Technoheater could last an incredible 10 years with running costs from 15p per hour. Experts have lab-tested the life span of the heating tubes to over 10,000 hours of use. This means that if you were to run the patio heater for 8 hours per day, 100 days per year, it could be 10 years before the heating tube needs changing.

REMOTE CONTROL

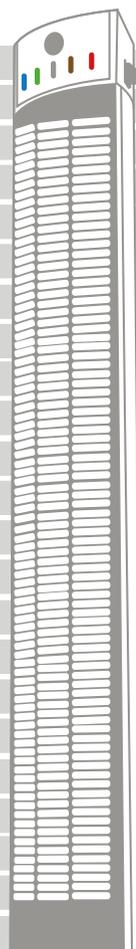

With the handy pocket sized remote control, you can manage all of the functions of your Technoheater from a distance.

PROTECTIVE LAYER

The Technoheater is created with a high quality, attractive, extruded aluminium finish that protects it from all elements for a longer lifespan. Custom colours are possible as the aluminium housing can be easily painted.

PIR ECONOMY FEATURE

The Technoheater range comes complete with the PIR feature which automatically turns off the heating after 4 minutes if there is no movement within 3-4 metres in front of the heater.

Venus

Vertical Wall Mounted Outdoor/Indoor Heater
Suitable for Pubs, Clubs, Hotels, Smoking Areas, Patios,
Balconies, Terraces and any Open Indoor Area.
The most effective wall mounted heater on the market.

FEATURES

- Safe-touch housing – Doesn't heat up to high temperatures from the element
- Carbon fibre infrared heating technology
- Save space – Mount this heater on any constructional materials, even wood, which saves space and gives off an elegant look.
- 1m long heating element - allowing the heating device to cover more space than halogen heaters
- Simple hook and slot makes mounting easy.
- Replaceable heating tube supports permanent installation.
- No harmful emissions
- Economical - more than 98% of consumed energy transmitted into infrared heat.
- 130° heating angle and 3.5m heating distance, the heat covers an area of up to 14m².

EASILY CONTROLLED AND SAFE

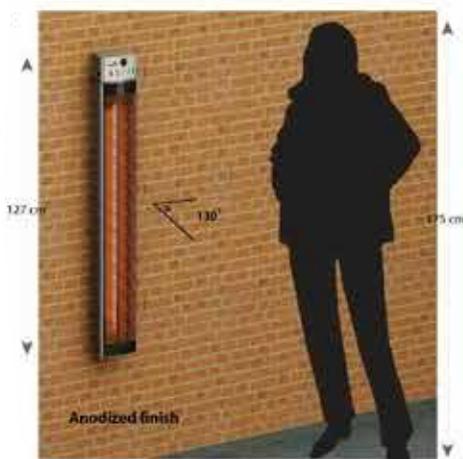

The Venus comes with a convenient remote which allows you to control all functions of the heaters from a distance such as the timer.

On/Off switch so there is no need to unplug from the mains.

The timers allows you set a specific time you would like to heater to be on for, or the timer will automatically switch the device off when the area is of an optimum temperature.

The built-in sensor will automatically switch the device off when it reaches the maximum temperature. This will also optimise energy consumption and reduce CO2 emissions even further.

Built-in Thermal Fuse that interrupts electric current when heated to a specific temperature.

Dimensions: L127xW19.5/9.5xD14cm
Projection angle: 130° at 3.5m distance
Heating Power: 208-240V 50Hz/60Hz 2000W
Weight: 9.4kg

Mercury

Outdoor/indoor free standing heater
Suitable for Pubs, Clubs, Hotels, Smoking Areas, Patios,
Balconies, Terraces and any Open Indoor Area.
The most user-friendly free standing heater EVER!

FEATURES

-Safe to touch - The Technoheater safe-touch feature means that the Mercury heater is safe to be used around children and animals.

Excellent coverage - the heater offers an astounding 14m² heating area.

-Sleek design - The slimline and stylish space saving design means that the heater is ideal for use where space is limited.

-Excellent coverage – the heater offers an astounding 14m² heating area.

-The self levelling base means that if the heater is knocked it will level itself to its original position.

-130° heating angle and 3.5m heating distance, the heat covers an area of up to 14m²

-The 1800kw heating element is easily replaceable and is rated to last for 10,000 hours of use.

-Easy to use - Simply remove the packaging and it's ready to be used, without the need for any assembling.

EASILY CONTROLLED AND SAFE

The Mercury heater runs from mains electric and features a built in on/off switch to quickly turn off your heater.

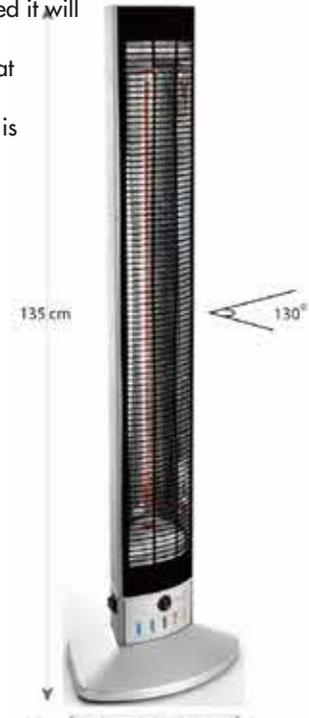

Every heater in the Technoheater range comes complete with a remote control making the heaters convenient and easy to use.

The heater has built in wobble technology which means when the heater is knocked it automatically self levels itself again.

Every heater in the range features a built in thermal fuse for added safety.

The built in tilt switch means that the heater automatically turns off if it is knocked over.

All Technoheater models feature a built in sensor which automatically turns off the heater if it overheats.

Dimensions: L37xW48xH143cm
Weight: 18.1kg
Projection angle: 130° at 3.5m distance
Heating Power: 208 – 240V 50Hz/60Hz 1800W

Vulcan

Wall or ceiling mounted Indoor/Outdoor Heater
Suitable for Pubs, Clubs, Hotels, Smoking Areas, Patios,
Balconies, Terraces and any Open Indoor Area.
Vulcan is our most versatile new heating unit, giving you
the option to have it as a wall or ceiling mounted heater.

FEATURES

- 130° heating angle and 3.5m heating distance, the heat covers an area of up to 22m² when hung from a height of 4m.
- The heater comes with its own full function remote control so you are able to control the heat output from far away.
- Every heater in the range features a built in thermal fuse for added safety.
- All Technoheater models feature a built in sensor which automatically turns off the heater if it overheats.
- Safe to touch housing - Doesn't heat up to high temperature from the element.
- Carbon fibre infrared heating technology
- Replaceable heating tube supports permanent installation.
- No harmful emissions
- Economical - more than 98% of consumed energy transmitted into infrared heat.

EASILY CONTROLLED AND SAFE

The Vulcan heater runs from the main and features a built in on/off switch to quickly turn off your heater.

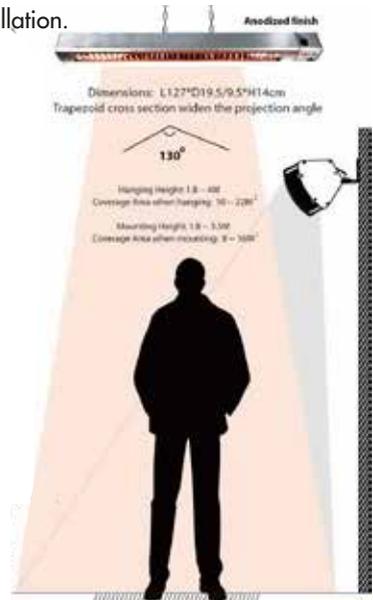

Every heater in the Technoheater range comes complete with a remote control making the heaters convenient and easy to use.

The heater has built in wobble technology which means when the heater is knocked it automatically self levels itself again.

THE ORIGINAL TECHNOHEATER RANGE

The Technoheater free standing range is able to offer you heat when and where you want it, by heating the person rather than the surroundings.

It's energy-saving motion sensor is fantastic for those who may be too busy to keep checking on the Heater for their outdoor areas.

It's almost indestructible as it passes the IP55 water resistance and has the rocking motion to stabilise it if it gets knocked. We are so confident with this product that we are happy to offer a 2 year guarantee.

FEATURES AND SPECIFICATIONS

- Uses a standard 220 - 240V electric supply
- No heavy gas cylinders to carry or refill
- Just plug in to 220-240V weatherproof outdoor socket or Power-Spike IPX5 extension lead.
- IP55 weatherproof design
- Zipped cover is supplied for additional protection.
- Latest carbon fibre heating technology
- Far infrared for a pleasant deep penetrating heat
- Instant heat with two heat settings - 1500W / 3000W
- Carbon fibre elements lasts 10,000 hours
- Effective heating range of 5m at 110 degree angle
- Safety tip-over & auto reset thermal cut-off mechanism.
- PIR economy feature - auto switch off motion censored
- Substantial base with roller and grab handle for easy mobility.
- Includes magnetic remote control that fits perfectly to the rear side of the unit.
- Chrome grille protects the elements and safe to touch.
- Power Consumption - 3kW (1.6 kW USA).

RUNNING COSTS

- *Heater has two 1.5KW heater tubes
- *15p to 30p per hour
- *Approx 10p per KW

ELECTRIC INFRARED PATIO & MARQUEE HEATERS

OTHER HEATERS BY GALA TENT

This infrared heater is exceptionally easy to use. The units come with easily attachable swivel brackets and provide targeted heat at the flick of a switch. The heater is available in two designs;

*Marquee Heater

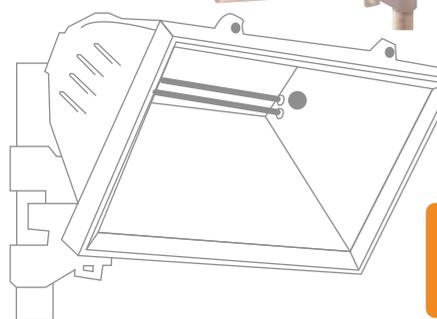

Marquee Heater

Designed to clamp to any strong marquee structure from 12.5mm to 60mm diameter surface which makes it ideal for awnings, marquees and gazebos.

SPECIFICATION

- No fumes or smell
- Easy attachable bracket
- Spreads a warm amber glow
- Increases the time you can spend outdoors
- Provides targeted heat at the flick of a switch
- Efficient and cheap to run (approximately 10p/hr)
- 1000w heater tube
- 5m heavy duty rubber cable.
- RoHS, CE, IP23 certified
- 13amp plug & fuse

Dimensions

Length: 33cm Height: 23cm Depth: 15cm

Patio Heater

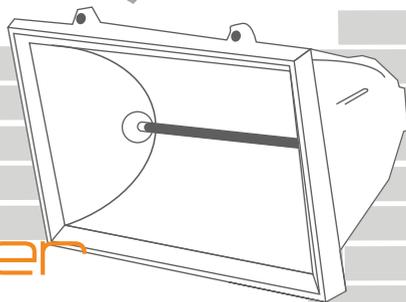

The Patio Heater is design to be mounted to any vertical hard surface. This heater is the perfect solution for patios, pubs, clubs and gardens when you may want to sit outdoors on those cool evenings. The 1kw infrared heater warms the person directly rather than the air.

SPECIFICATION

- No fumes or smell
- Easy attachable bracket
- Spreads a warm amber glow
- Increases the time you can spend outdoors
- Provides targeted heat at the flick of a switch
- Efficient and cheap to run (approximately 10p/hr)
- 1000w heater tube
- 5m heavy duty rubber cable.
- RoHS, CE, IP23 certified
- 13amp plug & fuse

Dimensions

Length: 33cm Height: 23cm Depth: 15cm

Parasol Heater

The popular Infrared patio heater with 3 powerful 100-watt heating elements. It has pressed steel and aluminium construction, making it suitable for indoor and outdoor environments. The heat technology includes infrared technology, complete with safety guards and highly polished quality reflectors

SPECIFICATION

- 3 Infrared Heater with 1000w lamp
- No fumes or smell
- Easy attachable bracket
- Spreads a warm amber glow
- Increases the time you can spend outdoors
- Provides targeted heat at the flick of a switch
- Includes 5 metres of heavy duty rubber cable and plug
- 13amp plug & fuse
- Efficient and cheap to run (approximately 10p/hr)
- RoHS, CE, IP44 certified
- Suitable for domestic and commercial use
- User infrared heating technology
- Colour White

"THIS IS THE FUTURE OF OUTDOOR HEATING"

Peter Jones, entrepreneur and investor on BBC TV's Dragon Den

As a heavy duty marquee company, we saw that there was a need for safe, efficient, environmentally friendly, low cost commercial quality outdoor / indoor portable heating units.

HOW IT WORKS

You probably learned about infrared light when you studied wavelengths in science class. You also might have heard about infrared radiation or infrared technology, and that infrared light isn't visible as it is beyond the spectrum which we can see. That's the gist of an infra-red heater: The heat is a product of light that is invisible to our eyes. The reason we get warm from an infra-red heater is because our skin and clothes absorb the light. It's like the difference between being directly in the sunlight versus sitting in the shade. You feel warm in the sun because the light that hits your clothes and skin keeps you warm, but when you're in the shade, the light doesn't reach you as well.

Feeling warm or cold does not actually depend on the temperature of the surrounding air. For example, skiers and mountain climbers do not freeze even in extremely cold, but sunny, air. They are bathed by rays from the sun, which include infra-red. We experience this heat directly on our skin and by rays reflected by the environment (snow, stones, earth etc.). When infra-red waves touch a surface, heat energy is released regardless of the surrounding air temperature. So people on a winter sports holiday are able to sunbathe despite the low temperatures - all thanks to Infra-red.
